

Name: Sean Kenneth H. Axalan	Section: BSIT-601
Subject: Management Information System	Date: 17/02/2026

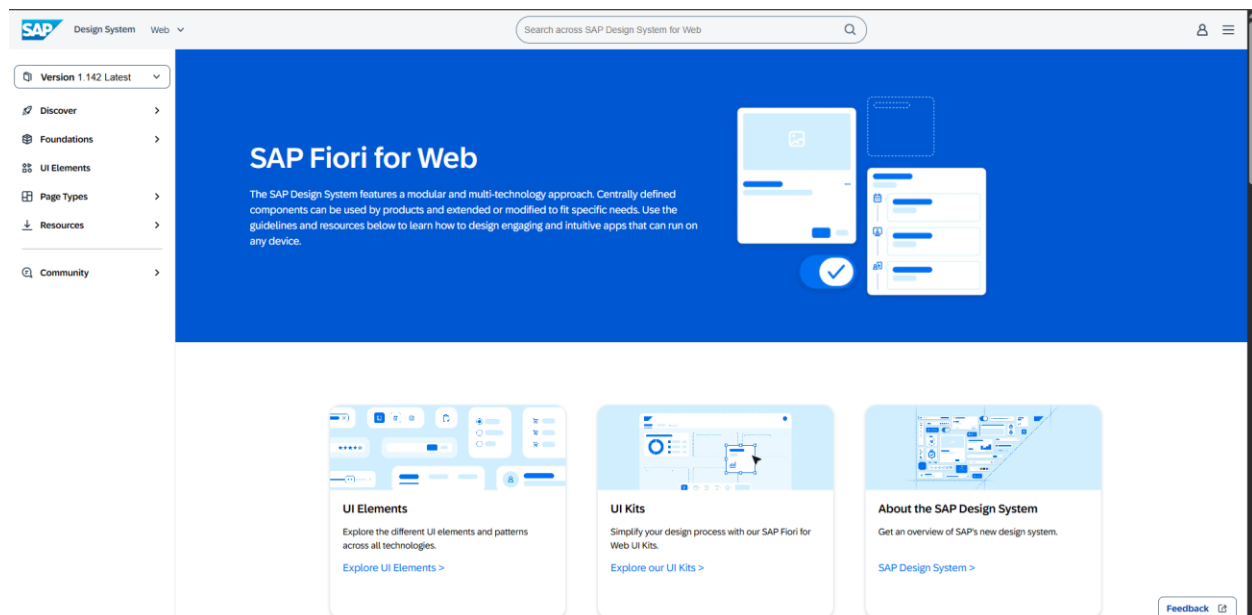

1. Which company owns the system? Provide the name of the system and the screenshot of its home page/dashboard. (5 points)

System Name: SAP S/4HANA

Company Owner: SAP SE

SAP SE is a German software company that specializes in enterprise applications. SAP S/4HANA is their flagship ERP system, powered by the SAP HANA in-memory database, which allows real-time processing of business data.

2. Enumerate five (5) modules available for this system excluding Home/Dashboard. Describe the specific function of each module. (5 items x 2 points)

1. Finance (FI)

- Tracks all financial transactions, manages accounts, creates reports, and ensures compliance. Basically, it keeps the company's money matters in check.

2. Sales and Distribution (SD)

- Manages the sales process from creating orders to delivering products and invoicing customers. It helps the sales team keep track of orders and customer interactions.

3. Material Management (MM)

- Handles procurement, inventory management, and supplier relations. Ensures the company has the right materials at the right time without overspending.

4. Production Planning (PP)

- Helps plan and schedule production activities, manage manufacturing resources, and optimize workflow on the shop floor.

5. Human Capital Management (HCM)

- Manages employee records, payroll, recruitment, and performance evaluations. It helps HR teams handle their workforce efficiently.

3. Cite five (5) widgets that can be found in Home/Dashboard. (5 points)

The SAP Fiori home dashboard uses **tiles/widgets** for a clear visual interface. Common examples include:

1. **KPI Tiles** – Show important metrics like revenue, expenses, or production efficiency.
2. **Workflow Approvals** – Display pending tasks or approvals like invoices or purchase requests.
3. **Reports Snapshot** – Mini view of important reports such as sales or inventory trends.
4. **Notifications** – Alerts for urgent tasks or updates.
5. **Task Tiles** – Quick links to create or manage orders, invoices, or HR tasks.
- 6.

4. Can additional widgets be added to Home/Dashboard? What are those? (5 points)

- Custom KPI Tiles – For department-specific metrics (e.g., sales targets, cash flow).
- Saved Searches – Quickly view filtered data, like “Open Purchase Orders.”
- Analytics Charts – Visual graphs of trends in sales, inventory, or finances.
- Quick Action Tiles – Shortcuts to create invoices, orders, or employee records.
- Workflow Tiles – Additional approvals or tasks specific to a role.

5. Which module do you find the most important? Why? (5 points)

Most Important Module: Finance (FI)

Reason:

Finance is the backbone of the business. All other modules sales, procurement, production, HR feed information into finance. Without accurate financial data, decisions about spending, investments, and budgeting could be risky. The Finance module ensures the company knows exactly where it stands financially in real time.

6. Provide recommendations to improve the system. (10 points)

Easier Customization – Make it simpler for non-technical users to personalize dashboards and tiles.

Better Mobile Support – Ensure full functionality on smartphones and tablets for remote work.

Faster Performance for Big Data – Improve speed when processing large amounts of transactions.
